QuickUp: Version 1.0

Hey! Welcome to QuickUp, the all-in-one task manager and chrome notes app. This app comes packed with many features and below you can find the docs and further information.

Documentation

Basics
- Press the '+' to create a new note
- Press the 'trash' to delete a note, *be careful this cannot be undone*
- Drag and drop the notes to reorder them
- Click on any of the notes to set it as *active*
- You can close the app at any time, QuickUp uses Chrome's local storage to save your notes

Intermediate
- Rename your note at the top of the page
- Use the search bar at the bottom to search for a note, search queries can either be the *title*, or the *contents* of the note
- Hover over the 'circle' to switch between the nine dynamic themes
- Press the 'download' button to create and download a .txt file containing the contents of your note

Text Editor
- Use the toolbar buttons to bold, underline, italicize, etc your notes. (However, is recommended to use the controls CTRL-B, CTRL-U and CTRL-I)
- Select some text and then use the highlight button to stylize the selected portion. To undo this you will have to remove formatting using the 'erase' button
- You can use the alignment options, and use bullet points to create a list

About

This app was made solely by Zohair Syed, and was last updated on March 23rd, 2024. Stay tuned for future updates!
